EXPERIENCE

RBC Borealis

Jan 2026 - Present

Software Engineer Intern

Toronto, ON

- Developed automated risk classification pipeline for **100+** production Agents submitted to Lumina Agentic Gateway using **keyword-based NLP** search to evaluate prompts and tool permission, surfacing real-time alerts on **Dynatrace** dashboard, accelerating deployment from **2 weeks** to **3 days**.
- Engineered Alert Module microservice for Lumina Common Service using **FastAPI in Python**, enabling **12+ platform** teams to send notifications via emails supporting **2K+** monthly alerts.
- Built Lumina Onboarding Flow Engine's workflow state management and persistence layer in **Go**, syncing **Temporal** workflows to **PostgreSQL** with transactional guarantees. Built workflow CRUD REST API endpoints and auth middleware providing role-based access control for **200+ monthly** submissions.

Homewise.AI

July 2025 - Dec 2026

Software Engineer Intern

San Francisco Bay Area, CA

- Designed **persistent session storage** on **GCP PostgreSQL** and layered a **prompt + query-result caching** tier over high-volume listing queries, raising cache hit rate from **20% to 88%**, cutting repeat-query latency from **~3min to seconds**, and lifting recommendation relevance by **55%** against a golden-dataset eval suite.
- Built an **automated evaluation pipeline** with golden datasets, **prompt versioning**, and a results dashboard that gated releases like CI and measurably raised tool-call accuracy, integrated **third-party APIs** and a **RAG pipeline** over 4 housing-document types using **Vertex AI Vector Search**.

McMaster Exoskeleton

Nov 2024 - Dec 2025

Software Engineer, ML & Data

Hamilton, ON

- Built a **CLI tool** on **AWS Lambda, S3, and Spark** for versioned upload/download of multi-GB exoskeleton training datasets, cutting upload latency **40%** via multi-threaded, checksum-verified ingestion and enforcing role-based access with **IAM policies**.

Scotiabank

Apr 2024 - Aug 2024

Software Engineer Intern

Toronto, ON

- Built a weekly **batch ELT pipeline** with **PySpark on GCP Dataproc**, orchestrated via **Cloud Composer (Airflow)**, to sync departed commercial-banking client records off **IBM mainframe**, flattening **deeply nested records** into normalized **BigQuery** schemas across **4TB+** of data with enforced data-quality checks, cutting **5+** analyst query latency by **30%**.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C/C++

Backend/Data: FastAPI, Django, GraphQL, Kafka, Redis, PostgreSQL, MongoDB, Temporal, LangGraph/Langsmith

Cloud/DevOps: AWS, Docker, Red Hat OpenShift, Git/GitHub

PROJECTS

F1 Real-Time Telemetry Intelligence Engine — Python, AWS, LangGraph

Apr 2026

- Architected AWS infrastructure with **VPC** security isolation, **EC2 spot instances** for cost optimization, **Lambda** for event-driven processing, and managed **Kinesis** stream to telematics data sources.
- Built a multi-agent F1 analytics assistant in **LangGraph**, routing queries through a supervisor node into specialized **regulation-RAG** and **text-to-SQL** subgraphs, with self-correcting validate and rewrite loops, cut hallucinated answers by **35%** w/ observability on **LangSmith** to monitor cost, latency, and build evals.
- Built end-to-end data infrastructure combining historical **ETL pipeline** ingesting 10 years of F1 race data into PostgreSQL and real-time streaming system using **EventBridge, Kinesis, and Lambda**, enabling **sub-300ms** latency queries for live dashboard processing **10K+ records/race**.

EDUCATION

McMaster University

Hamilton, ON

B. Eng Software Engineering CO-OP

Expected Grad: April 2027

- Relevant Coursework:** Databases, Data Structures & Algorithms, Operating Systems, Software Architecture

CERTIFICATION

AWS Associate Solutions Architect
Building with Claude API

Sched Sept 2026
May 2026
