EDUCATION

McMaster University

Hamilton, ON

B. Eng Software Engineering CO-OP

Expected Grad: April 2027

- **Relevant Coursework:** Databases, Data Structures & Algorithms, Operating Systems, Computer Networks, Software Architecture

TECHNICAL SKILLS

Languages: Python, Java, SQL, C/C++

Backend/Data: FastAPI, Django, GraphQL, Kafka, Spark, Redis, PostgreSQL, MongoDB

Cloud/DevOps: AWS, GCP, Docker, Red Hat OpenShift, Git/GitHub

AI/ML: LangGraph/LangChain, FastMCP, RAG Architecture

EXPERIENCE

RBC Borealis

Jan 2026 - Present

Software Engineer Intern

Toronto, ON

- Instrumented RBC Assist agents with the **Langfuse SDK** to stream interaction logs (prompt content, model metadata, token usage, latency, user context) into **MongoDB** at **100K+ interactions/day**, and built a **pandas** ETL pipeline that cleans and aggregates each daily batch in **<2 min** to power a **Streamlit** dashboard for AI-safety and compliance review.
- Owned an enterprise-grade microservice using python **RestAPI** and **GraphQL** with async **Temporal** workflow orchestration and **Kafka** event streaming, handling **2.5M+ monthly tasks** across **12+** platform teams, maintaining **99.2% uptime**.
- Built Lunmina Portal production readiness platform automating **Kubernetes compliance, security scanning, and SLA verification** on OpenShift OCP4, reducing production deployment time by **80%** enabling **Slack automation** and self-service validation for **200+** applications .

Homewise.AI

July 2025 - Jan 2026

Software Engineer Intern

San Francisco Bay Area, CA

- Deployed **parallel multi-agent workflows** with **Python** and **REST APIs** (Google ADK), orchestrating tool-calling agents, **MCP servers**, and **RAG pipelines** for real estate search and recommendation.
- Designed **persistent session memory** on **GCP PostgreSQL** and implemented **query-result caching**, raising cache hit rate from **20% to 88%** and lifting listing recommendation relevance by **55%**.

McMaster Exoskeleton

Nov 2024 - Dec 2025

Software Engineer, ML & Data

Hamilton, ON

- Developed a cloud **ETL platform** with **AWS Lambda, S3, Apache Spark, and a custom CLI**, reducing dataset upload latency by **40%** via multi-threaded ingestion with checksum-verified data integrity.
- Engineered a **time-series sensor telemetry pipeline** with **Python, pandas, scikit-learn, and TensorFlow**, converting raw sensor streams into validated feature datasets for real-time movement classification at **6.2% MAPE**.

Scotiabank

Apr 2024 - Aug 2024

Software Engineer Intern, Data

Toronto, ON

- Engineered a scalable **ELT pipeline** with **Python, Kafka, Spark, and GCP BigQuery** to migrate **4TB+** of legacy IBM customer data, enforcing data-quality checks and reducing query latency by **30%** for **50+ analysts**.

PROJECTS

F1 Real-Time Telemetry Intelligence Engine — Python, AWS Kafka, PostgreSQL Apr 2026

- Engineered a **real-time telemetry ingestion platform** on **AWS EC2** with **Kafka, Redis, and PostgreSQL**, processing **100K+ live telemetry events per race** and powering live-monitoring and historical dashboards.
- Built an **LLM agent layer** with tool-calling workflows and **SQL-based retrieval**, enabling natural-language querying over live telemetry, race history, driver performance, and strategy windows.

Custom HTTP Framework with Raw TCP Server — Python, Networking, Concurrency Dec 2025

- Built an **HTTP/1.1 server from raw TCP sockets** with request parsing, routing, middleware, static file serving, and concurrent connection handling.
- Implemented **thread-based concurrency**, structured logging, and error handling to serve multiple simultaneous clients reliably.
