EDUCATION

McMaster University

B. Eng Software Engineering CO-OP

Hamilton, ON

Expected Grad: April 2027

- **Relevant Coursework:** Databases, Data Structures & Algorithms, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: Python, Java, Go, SQL, C/C++

Backend: FastAPI, Django, GraphQL

AI/ML: LangGraph/LangChain/LangSmith, RAG, MCP, TensorFlow, scikit-learn, pandas

Data/Infra: PostgreSQL, MongoDB, Redis, Kafka, Spark, Flink, BigQuery, Airflow

Cloud/DevOps: AWS, GCP, Docker, Kubernetes, Red Hat OpenShift, Git/GitHub

EXPERIENCE

RBC Borealis

Software Engineer Intern

Jan 2026 - Present

Toronto, ON

- Built a production **AI agent evaluation platform** with **Python, MongoDB, Langfuse, and LLM-as-a-judge evals**, standardizing risk scoring and observability across **20+ enterprise AI agents** and cutting manual review time by **per release cycle**.
- Shipped a **FastAPI notification service** using **Python, PostgreSQL, Docker** delivering access-controlled templates and parameterized email alerts to **200+ stakeholders** across **12+ engineering teams**.

Homewise.AI (ex-Meta, Google, Databricks)

Software Engineer Intern

July 2025 - Jan 2026

San Francisco Bay Area, CA

- Built **parallel multi-agent workflows** with **Google ADK, Python, and REST APIs**, orchestrating tool-calling agents, **MCP servers**, and **RAG pipelines** for real estate search and recommendation tasks.
- Lifted listing recommendation relevance by **55%** by designing persistent session memory with **GCP PostgreSQL** and implementing query-result caching, raising cache hit rate from **20% to 88%**.

McMaster Exoskeleton

Software Engineer, ML & Data

Nov 2024 - Dec 2025

Hamilton, ON

- Engineered a **time-series telemetry pipeline** with **Python, pandas, scikit-learn, and TensorFlow**, converting raw sensor streams into validated feature datasets for real-time movement classification at **6.2% MAPE**.
- Developed a cloud **ETL platform** with **AWS Lambda, S3, Apache Spark, and a custom CLI**, reducing dataset upload latency by **40%** via multi-threaded ingestion while enforcing checksum-verified data integrity at scale.

Scotiabank

Software Engineer Intern, Data

Apr 2024 - Aug 2024

Toronto, ON

- Engineered a scalable **ELT pipeline** with **Python, Kafka, Spark, and GCP BigQuery** to migrate **4TB+** of legacy IBM customer data, enforcing data-quality checks and reducing query latency by **30%** for **50+ analysts**.

PROJECTS

F1 Real-Time Intelligence Engine — Python, NLP, SQL

Aug 2025

- Engineered a **Bloomberg Terminal-style analytics platform** with **AWS EC2, Kafka, Flink, Redis, and PostgreSQL**, processing **100K+ live telemetry events per race** across live monitoring and historical dashboards.
- Built an **LLM agent orchestration layer** **Python NLP**, tool-calling workflows, **SQL-based retrieval** enabling natural-language querying over live telemetry, race history, driver performance, and strategy windows.

Custom HTTP Framework with Raw TCP Server — Python, Concurrency

Dec 2025

- Built a lightweight **HTTP/1.1 server from raw TCP sockets** with request parsing, routing, middleware, static file serving, and concurrent connection handling.
- Implemented **thread-based concurrency**, structured logging, and error handling to serve multiple simultaneous clients reliably.
